

# Case Study

## Digital Media

### Overview

Central Manpower Base (CMPB) Online Engagement Portal (OEP) aims to equip Pre-Enlistees with necessary information to be listed on National Service Enlistment. Few information was requested to be delivered through videos with additional features/services so that the pre-Enlistees could receive the information in a most effective and efficient manner. And such feature comprises:

- A Digital Access Management (DAM) portal, which can be accessed by various user groups. To facilitate the efficient administration of video content, generation of statistical reports and managing user accounts by the admin.

- To ensure that the System in place has mitigations against security vulnerabilities and risks listed in the Open Web Application Security Project (OWASP) Top 10 and the SANS Institute/Common Weakness Enumeration (CVE) Top 25 Software Errors
- To ensure that the Computing Environment and System adheres to the secure configuration benchmarks published by the Centre for Internet Security (CIS)

## Solution

Work plan and mitigation measures were discussed and formulated together with EVVO Media team and EVVO CyberSecurity Team that were developed to address the customers' need and to exceed the performance and security expectations.

The work plan, together with all the security solutions to mitigate all said risks, were collated and developed into the Scope of Work (SoW) and was presented to CMPB OEP team. After a few rounds of consultation and discussion session, a finalised SoW within a stipulated timeframe was delivered. Furthermore, EVVO team completed the entire project within the stipulated project timeline. However due to security concerns and data protection, details in the SoW cannot be shared here.

## Snapshots of our project (DAM-Portal)
