

AppSec as-a-Service

SERVICE OVERVIEW

AppSec-as-a-Service is an Evvo Secure By Design suite of security services that is designed to guard against constantly changing threats to modern apps. It combines cutting-edge technology with a team of Evvo Labs' security specialists to ensure that applications are developed safely from the ground up, AppSec-as-a-Service accelerates the integration of security practices into the application development lifecycle.

SERVICE & FEATURES

— Constant Security Testing

Evvo Labs' security specialists implement and maintain a continuous integration pipeline that continuously tests the security of apps at every stage of their development. This helps to lower the risk of security breaches by ensuring that vulnerabilities are found and corrected prior to the release of the application to production environment.

— Vulnerability Management

AppSec-as-a-Service monitors and performs triaging of vulnerabilities. We rank vulnerabilities according to their potential impact and offers remedial advice, assisting development teams in dealing with security issues quickly and effectively.

— Penetration Testing

Professional penetration testing services are part of our AppSec-as-a-Service and it help companies find potential security holes in the applications. Using their in-depth understanding of the most recent attack methodologies and technologies, our team of knowledgeable ethical hackers mimics actual attacks. This in-depth testing helps companies find hidden vulnerabilities and assess the efficiency of their security solutions.

— Active Security Posture Monitoring

We passively gather information across the internet to provide an unbiased, outside-in assessment of an organization's cybersecurity posture.

— Secure Code Review

Our knowledgeable security analysts evaluate secure code to find and fix security flaws at the code level. This results in improvement of the overall security posture of your application.
